

Watersprint

Innovative and intelligent water treatment for private wells

Safe

Effectively kills all bacteria, protozoa and viruses with modern UV LED technology.

Energy-efficient

Smart modern UV LED technology contributes to an energy-effective solution.

Easy installation

Compact unit for houses, easy installation and use.

Environmentally friendly

No chemicals and no mercury.

Low cost

Long lifespan, very low maintenance, energy-efficient, short ROI.

Watersprint For safe drinking water

There may be many activities and circumstances in your vicinity that affect the quality of the water in your well, such as waste water infiltration, sewer pipe leakage, agriculture or manure storage.

Watersprint is a world-unique Swedish innovation that offers the best protection against these risks. The unique thing about Watersprint's product is that it makes smart use of UV LED technology, resulting in a new and highly energy-efficient product that is only active when the water is turned on. The groundbreaking aspect of the product is that it generates UVC light from LEDs the size of a pinhead.

It is the most environmentally friendly product of its kind on the market today because it uses no chemicals or mercury. It is also maintenance-free as there is no need for annual lamp replacement.

The purified water is safe to drink and use in cooking.
