

For us, sustainability means maintaining a holistic vision and environmental consciousness throughout the supply chain. For this reason, our sustainability efforts start close to home, in our factory in Mora, Sweden.

Our mixers are produced with the maximum possible respect for the environment at every stage – from design and choice of materials to production, transport, use and recycling.

“

You might think it's expensive to invest in a new mixer, but that's actually not the case. A basin mixer with our Cold Start function will earn back your investment in just a year, and then continue saving you money. Environmental care isn't only easy – it's also cheap in the long term.

”

**Marina Morell**  
*Product Manager*

We champion a better environment by focusing on the small environmental challenges of everyday life. And we try to make it easy for you to take environmental responsibility – by choosing a sustainable mixer.

# Choose a mixer that is sustainable

– for you and the environment

**FM Mattsson**

**FM Mattsson**

### Sustainable production

With our innovative technical solutions and 150 years' experience, we make mixers that are sustainable and environmentally friendly throughout the supply chain, from design to recycling.

**Locally produced.** All our production is located in Mora, Sweden. This makes it easy for us to control our emissions and environmental impact. It also minimises transport distances to our suppliers and customers in Scandinavia.

**Environmentally friendly.** Most of our raw materials come from Sweden. We always strive to use environmentally friendly materials, lead-free materials and – whenever possible – recycled materials. We always aim to reduce our overall environmental impact when manufacturing new products.

**Recycling.** When your mixer has completed its useful life, you can hand it in to us for recycling. We make sure the various materials are disposed of properly.

### Mixers with a long lifespan

After a FM Mattsson mixer is installed, it should stand up to many years of daily use. High quality equals hard-wearing mixers.

**The Soft Closing function** ensures that the tap closes gently when you turn the water off. This prevents water hammer in the pipes and prolongs the life of the mixer, pipes and connectors.

**Guarantee.** Our mixers are built to last. In the unlikely event of a fault, we provide excellent guarantees and fast service to help you solve the problem.

**Spare parts** are available for all our products. This means you usually don't have to replace the whole mixer, but only individual parts. You can easily source the parts in shops and through our installers nationwide.

Did you know that an environmentally smart mixer can cut your water and energy use by 30 percent?

### Save water and energy

The average person in Sweden uses roughly 140 litres of water every day. And a fifth of the energy in a typical household goes to water heating. We can reduce these figures simply by installing environmentally smart mixers.

**Energy-efficient.** We know that an environmentally smart mixer can cut your water and energy consumption by up to 30 percent. Many of our products are classified under Swedish energy class A to C for mixers. And the Eco Plus function reduces water pressure without affecting perceived comfort.

**The Cold Start** function ensures that when the mixer lever is in the central position, the tap only supplies cold water, without mixing in warm water that requires energy to heat up. Studies have shown that we usually turn the tap off before the water has had time to warm up.

**Siljan Duo** and **9000E Tronic** are our touch-free mixers. When you put your hand in front of the sensor, the mixer automatically starts and supplies water for a limited time. This saves water and energy.
